# HOW IS IT PRODUCED?

---

As a company that produces high-quality cat litter with high privileges, İner Perlit İnş. San. ve Tic. Ltd. Şti. has entered the world cat litter market with the Royal Maine Coon brand. The company, which commercialized its R&D studies, in which it has conducted and made strong investments, under the name of Royal Maine Coon in 2019, carries out sufficient and high-quality production with meticulous work from its packaging to logistics, from production to digital platform investments, and from quality certifications to its personnel.

## WE OWE OUR POWER TO NATURE

Royal Maine Coon, which produces high-performance cat litter, draws its strength from nature. Perlite, which is among Turkey's natural resources, is an acidic volcanic magmatic rock that contains 2-6% water in its grain wall. Perlite, which is expanded with high heat, consists of white particles that can gain up to 25-30 times its volume. Perlite, which is used in many sectors, is human and nature friendly.

After the production phase, it takes on a microporous structure and provides high performance in processes such as insulation, filtration, water retention. It is non-flammable and does not release gas by reacting with oxygen. It has inorganic and antibacterial properties.

By using perlite for thermal insulation purposes, especially in the construction industry, our dependence on petrochemical derivatives will also decrease.

Our company, which fulfills an important responsibility by bringing our country's natural resources to the economy with the miracle of perlite coming from nature, has offered you Royal Maine Coon cat litters, which are the product of many years of R&D studies and Royal Maine Coon cat litters that care about cat health and offer high performance.

# DIFFERENCE

As **Royal Maine Coon**, we would like to state that our products comply with world standards and contain many advantages (demanded by the consumer) compared to other cat litter products...

100% Natural and  
Environmentally  
Friendly
